PROFILE

Backend-focused Full-Stack Developer with experience designing scalable systems using NestJS, PostgreSQL, and Redis. Skilled in building multi-tenant architectures, event-driven workflows, and secure APIs with encryption and robust authentication mechanisms. Delivers production-ready applications with a focus on performance, reliability, and maintainability.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript
- **Frontend:** React, Next.js, Tailwind CSS, Framer Motion
- **Backend:** Node.js, Express.js, NestJS
- **Databases:** PostgreSQL, MongoDB
- **Tools & DevOps:** Docker, Redis, BullMQ, AWS S3, Git, GitHub, Postman, Vercel
- **Security:** JWT, RSA Encryption, Role-Based Access Control, Cookie-Based Sessions

WORK EXPERIENCE

WITCORNER — *Quality Assurance Tester*
June 2023 – December 2023

- Performed manual functional, usability, and cross-browser testing across multiple devices.
- Analyzed software requirements and collaborated with developers to resolve issues efficiently.
- Documented and tracked bugs, ensuring timely resolution and regression coverage.

DEPASA MARINE LIMITED — *Technical Intern*
February 2023 – August 2023

- Supported team operations through effective coordination and task prioritization.
- Contributed to internal communication processes and meeting documentation.
- Collaborated across teams to meet project timelines in a fast-paced environment.

PROJECTS

Velto — Full-Stack Developer
Tech: NestJS, Prisma, PostgreSQL, Redis, Bull, Docker, Twilio, SendGrid

- Built a multi-tenant backend with wildcard subdomain support for independent storefronts.
- Designed event-driven architecture using queues for asynchronous notifications (email, WhatsApp, in-app).
- Implemented structured error handling with custom error codes and global exception filters.
- Developed marketplace and social feed features including posts, likes, comments, and filtering.

VerifyHub — Frontend Developer (Team of 2)
Tech: Next.js, TypeScript, Tailwind CSS, React Query, Axios, Framer Motion

- Built a secure verification platform for NIN, BVN, and CAC services with client-side encryption.
- Implemented 2FA authentication with OTP flow and session-based access control.
- Engineered bulk Excel/CSV processing with automated validation and comparison logic.
- Developed a responsive dashboard with real-time verification workflows and activity tracking.

LifeData — Frontend Developer (Team Project)
Tech: Next.js, TypeScript, Tailwind CSS, TanStack Query, Web Crypto API

- Developed a multi-step onboarding system with dynamic validation and progress tracking.
- Implemented RSA-OAEP encryption to secure sensitive user data before transmission.
- Built an admin verification dashboard with real-time identity comparison workflows.
- Created role-based company portal with employee management features.

Taj Kulture — Full-Stack Developer
Tech: NestJS, PostgreSQL, Redis, Prisma, BullMQ, AWS S3

- Built secure authentication with JWT, refresh token rotation, and rate limiting.
- Designed event-driven systems for notifications and background processing.
- Implemented centralized error handling with structured logging and request tracing.
- Developed vendor onboarding workflows with caching and cloud storage integration.

VOLUNTEER EXPERIENCE

Church Application Project (BCU App) — *Frontend Contributor*

- Improved usability and interface design for a community-focused application.
- Collaborated with a team to build and enhance frontend features.

EDUCATION

Bachelor of Engineering (B.Eng.) — Material Science and Engineering
Kwara State University — 2024
